

THE FUTURE IS OURS TO BUILD™

January 3, 2011

To Whom It May Concern:

Bartlett Cocke General Contractors has an established working relationship with Jasmine Engineering and has enjoyed a longstanding relationship with the firm for more than 20 years. Their team approach has resulted in practical MEP and commissioning solutions, as well as a successful project delivered on time and within budget.

Our firms have worked together on multiple educational facility projects where Jasmine Engineering has served as the commissioning agent, including projects for the Texas A&M University System and the University of Texas System. We have also worked together as a team on projects for the City of San Antonio and we fully understand their culture and management techniques.

Jasmine Engineering's principals and personnel have shown their devotion to teamwork by encouraging open communication and a willingness to roll up their sleeves and work problems out efficiently and effectively. No matter what the circumstances, their staff is always professional, courteous, shows attention to detail and is very knowledgeable of the MEP systems.

Bartlett Cocke General Contractors would gladly work with Jasmine Engineering again on any project. Their practical approach to resolving issues and identifying cost effective solutions have helped make our projects successful and have created significant cost and time savings for our clients.

Very truly yours,

A handwritten signature in black ink, appearing to read "Kirk Kistner". The signature is written in a cursive, flowing style.

Kirk Kistner
