Re: Letter of Recommendation

TO WHOM IT MAY CONCERN:

This letter is intended to express my appreciation for our longstanding working relationship with Jasmine Engineering, Inc. For the past twenty years, it has been my pleasure to work closely with Jasmine Engineering in various capacities and on a variety of projects of various facility types – including the Austin Convention Center, several projects for Bexar County, Austin ISD and most recently, Harlandale ISD (HISD). SpawGlass completed over ten projects of the \$53 million, 2006 HISD Bond Program. These projects were highly complex, multi-phased, renovation and additions. and Jasmine Engineering was the school district's Commissioning Agent and Project Manager.

On the Austin Convention Center project, Jasmine Engineering was part of the Project Management Team and was responsible for Project Management functions related to the MEP and other engineering systems. They provided services during the Pre-construction and Construction Phases that included; cost estimating, design and constructability review, and construction documentation of systems testing, start up, and commissioning.

Regardless of the project circumstances or their role, we have found that Jasmine Engineering always follows an effective team approach to solving the needs of the Owner and addressing every aspect of the specific project requirements.

Jasmine Engineering's background in MEP Engineering and Design becomes a tremendous asset to their clients in terms cost estimating, indoor air quality and other challenges associated with MEP systems. Whether in the role of Project or Program Manager or Commissioning Authority, this expertise works to save their clients significant time and money.

Jasmine Engineering's personnel believe in strong communication throughout a project with all team members to achieve the desired result and satisfaction of the end user. Their attention to detail and practical approach to resolving issues and identifying innovative cost effective solutions and alternatives has been consistently instrumental in making our projects successful and creating significant cost and time savings for the Owner.

As always, we look forward to future opportunities to work with Jasmine Engineering, Inc.

Sincerely

A handwritten signature in blue ink, appearing to read 'Robert Farmer', is written over the printed name and title.

Robert Farmer
