Re: Jasmine Engineering

To whom it may concern:

This letter is to inform you that we have worked in the past on projects with Jasmine Engineering and are presently working with Jasmine Engineering concerning the Harlandale Independent School District bond project. This project is ongoing and includes multiple educational facility projects at various school locations. These projects include additions as well as renovation work on existing facilities. The multitude of projects associated with this bond program has concurrent and overlapping schedules.

We have found the staff at Jasmine Engineering very knowledgeable in the projects we are involved in and helpful in all aspects of the process. If issues arise, the staff has responded in a very timely manner with clear and concise direction. While we are not directly involved with the Construction Administrative aspect of the project, we have observed that Jasmine Engineering has been concerned with quality control while still maintaining cost initiatives.

We look forward to working with the staff at Jasmine Engineering again on projects in the future.

Sincerely,
Engineered Air Balance Co., Inc.

Gary L. Miller, P.E.
